

Tokens & Data types

# MCQs (Part 01)

# Question 1

1. Which of the following is not a token in C?

- A) Keyword ✓
- B) Identifier ✓
- C) Comment ← Not a part of a program
- D) Operator ✓

# Question 2

2. Which of the following keywords is not present in C?

- A) auto
- B) register
- ~~C) friend~~
- D) extern

# Question 3

3. Which of the following is a valid identifier in C?

- A) 2var ← Not start with number
- B) \_var2 ✓
- C) var-2 ← Special Symbol
- D) var 2  
    Space is NOT allowed

# Question 4

What is the range of an integer literal in C?

- ✓ A) Depends on the compiler
- B) -32768 to 32767
- C) -2147483648 to 2147483647
- D) 0 to 65535

int  
Old Compiler - 2 bytes  $\leftarrow$  16 bits  
New Compiler  $\rightarrow$  4 bytes  
 $\downarrow$   
32 bits

Range  $\rightarrow \left[ -2^{n-1} \text{ to } 2^{n-1} - 1 \right] n = \text{bits}$

Signed 2's Complement form

# Question 5

- 5. Which of the following is a valid character literal in C?
- A) 'a' ← Single quote
- B) "a" ✗
- C) 'abc' — ✗
- D) "a"" ✗

# Question 6

- 6. Which escape sequence represents a newline character in C?  
A) \n  
B) \t  
C) \b  
D) \\

# Question 7

7. What will be the output of the following code snippet?

```
printf("%d", sizeof('A'));
```

- A) 1
- B) 2
- C) 4
- D) 8

$\underbrace{\text{int}}_{\text{4 bytes}}$

$A \leftarrow \text{character} \leftarrow \text{byte}$

$\underbrace{\text{printf} (" \% d", 'A' )}_{\# 65} \leftarrow \underbrace{\text{int}}_{=}$

# Question 8

8. Which of the following is not a type of literal in C?

- A) Integer literal
- B) Floating-point literal
- C) Character literal
- D) Pointer literal

# Question 9

9. Which operator is used for conditional execution in C?

- A) &&
- B) ||
- C) ?: *ternary operator*
- D) ==

? :

# Question 10

10. What is the significance of keywords in C?

- A) They are user-defined names
- ~~B) They are pre-defined, reserved words used by the compiler~~
- C) They can be used as variable names
- D) They are only used in header files

# Question 11

11. Which of the following is not a valid integer literal in C?

- A) 10 ← decimal integer
- B) 010 ← Octal integer
- C) 0x10 ← Hex Code
- D) ob10

# Question 12

12. Which is the correct representation of a hexadecimal integer literal in C?

- A) ~~0x1F~~
- B) ~~0X1F~~
- C) ~~0x1g~~ ~~0-f~~
- D) Both A and B

$0x \underline{\quad}$   
 $0x \underline{\quad}$  } valid

$0x10 \rightarrow a$   
 $0x10 \rightarrow A$

# Question 13

13. What does the following code output?

```
printf("%f", 3.14);
```

• A) 3.140000

• B) 3.14

• C) 3

• D) 3.140

3.14 0000  
6 decimal values

# Question 14

14. What is a token in the context of C programming?

- A) ~~A single element of a program, such as a keyword or operator~~
- B) A function name
- C) A variable that stores data
- D) None of the above

# Question 15

15. Which of the following is a valid string literal in C?

- A) "Hello, World!"
- B) 'Hello, World!' ←  $\times$  ← Single quotes → Char
- C) ""Hello, World!" ←  $\times$
- D) Hello, World!  $\times$

# Question 16

16. Which of the following literals represents a double in C?

- ✓ A) 123.4
- B) 123.4f ← float
- C) 123 ← int
- D) '123' ← x

Double is default for  
any number having a point.

# Question 17

17. Which of the following is a correct comment in C?

- A) /\* This is a comment \*/
- B) // This is a comment
- C) Both A and B
- D) None of the above

/\* \_\_\_\_\_ \*/

Multiline

Single line

# Question 18

18. Which of the following represents an octal literal in C?

- A) 10 ← int
- B) 010 ← Octal      \* Any integer starts from 'zero'  
                          Considered as Octal.
- C) 0x10 ← Hex
- D) 100 → int

# Question 19

Other Base → decimal

19. What is the value of 0xFF in decimal?

- A) 255
- B) 256
- C) 512
- D) 1024

↳ Hex

$$\begin{aligned} F & \quad + \quad F \\ 16^1 & \quad \quad \quad 16^0 \\ = & \quad \quad \quad F \times 16^1 + F \times 16^0 \\ & \quad \quad \quad 15 \times 16 + 15 \\ & \quad \quad \quad \downarrow \\ & \quad \quad \quad 240 + 15 \\ & = \quad 255 \end{aligned}$$

# Question 20

20. Which of the following literals is not supported directly in C?

- A) String literal ← *array of Character*
- B) Boolean literal
- C) Integer literal
- D) Floating-point literal

# Question 21

The Containers whose value does not change -

21. Which of the following correctly declares a constant integer in C?

- A) `int const a = 10;`
- B) `const int a = 10;`
- C) `#define a 10`
- D) All of the above

→ # ← Preprocessing

# include } macros  
# define

#define x 10  
fix the value  
of x = 10 for whole  
program.

int x = 10;  
x++; variable  
x → 11

Canot int x = 10; or int const x = 10;  
x++ ← Error

'const' Keyword is  
Used to make a  
Value Constant

# Question 22

22. What is the value of the expression `sizeof(123.45F)`?

- A) 4
- B) 8
- C) 2
- D) 1

*float*  
↳ 4 bytes

# Question 23

23. Which keyword is used to declare a variable that cannot be modified?

- A) static *→ Read only*
- B) volatile
- ~~C) const~~
- D) register

# Question 24

24. What is the ASCII value of the character literal 'A' in C?

- A) 65
- B) 66
- C) 97
- D) 98

A → 65

a → 97

# Question 25

25. Which of the following is a valid floating-point literal in C?

- A) 3.14 ✓
- B) 3. ✓
- C) 3.0 ✓
- D) All of the above

float m = 3.; ← allowed

# Question 26

26. Which is not a valid identifier in C?

A) int1

B) \_var

C) break ← Keyword ✓

D) Var\_1

# Question 27

27. Which of the following statements is true regarding string literals in C?

- A) They are enclosed in single quotes. *Char*
- ~~B) They are enclosed in double quotes. *String*~~
- C) They can contain newline characters without escape sequences. *X*
- D) None of the above.

# Question 28

Space, tab, newline

28. What does the term "whitespace" refer to in the context of C tokens?

- A) Characters like spaces, tabs, and newlines that are ignored by the compiler.
- B) Characters used in string literals.
- C) Comments in the code.
- D) Unused memory.

# Question 29

29. Which of the following escape sequences is incorrect in C?

- A) \a ✓
- B) \b ✓
- C) \v ] *Qu    Correct*
- D) \x ]

# Question 30

30. Which of the following is a valid representation of a float literal in C?

- A)  $3.14e2 \leftarrow 3.14 \times 10^2$        $e = 10$
- B)  $3.14E-2 \leftarrow 3.14 \times 10^{-2}$
- C)  $3.14f \rightarrow \text{float}$
- ~~D) All of the above~~

# Question 31

31. What type of literal is the following in C: 012?

- A) Decimal integer
- ~~B) Octal integer~~
- C) Hexadecimal integer
- D) Floating-point number

↳ Octal integer

# Question 32

33. Which of the following is a valid hexadecimal floating-point literal in C?

- A)  $0x1.1p2 \rightarrow 1.1 \times 16^2$        $p = 16$
- B)  $0x1.2p-2 \leftarrow 1.2 \times 16^{-2}$
- C)  $0x.1p1 \rightarrow 0.1 \times 16^1$
- D) All of the above

# Question 33

34. Which of the following is not considered an operator in C?

- A) +
- B) sizeof
- C) &
- ~~D) and~~

# Question 34

35. Which of the following identifiers is valid according to C naming conventions?

- A) int\*var *← invalid*
- ~~B) var\_name ✓~~
- C) var~~o~~-name *✗*
- D) 3var  
*← Number*

# Question 35

36. What will be the output of the following C code?

```
printf("%d", sizeof(5.0));
```

- A) 2
- B) 4
- C) 8
- D) Undefined

8 bytes  
double

4  
" %d ", sizeof('A')  
Size of ('5')  
int

# Question 36

Change back to its previous state  
परिवर्तन करें उसके पहले हाल

37. What does the keyword volatile signify in C?

- A) The variable is stored in CPU registers.
- B) The value of the variable can be changed unexpectedly.
- C) The variable can be modified only once.
- D) The variable is used in multithreading.

# Question 37

38. Which of the following is an example of an integer constant in C?

- A) 5.0 ← float
- ~~B) 5L ← long int~~
- C) 5.of ← float
- D) '5' ← char

# Question 38

39. Which of the following is not an escape sequence in C?

- A) \r ← Carriage return
- B) \t
- C) \s
- D) \n

world  
Hello\r World

# Question 39

40. Which of the following correctly describes a literal in C?

- A) A variable that holds a value
- B) A function that returns a constant
- C) A fixed value used directly in the code ✓
- D) A keyword used to define a constant

*Variable*

*literal*

*literal*

```
x = 5; // Variable
```

```
printf("%d", x + 10); // Literal
```

5

# Question

Which of the following is not a basic data type in C?

Options:

- a) int
- b) float
- c) double
- d) string

# Question

Which of the following data types can store a single character in C?

Options:

- a) char
- b) int
- c) float
- d) double

# Question

What is the output of the following code snippet?

```
int a = 5;  
float b = 5.5;
```

```
printf('%d', a + b);
```

Options:

- a) 10
- b) 10.5
- c) Garbage Value
- d) Compilation error

$$5 + 5.5 = \underline{\underline{10.5}}$$

float

double

float

int

char

float + int = float

# Question

2's Complement

What is the range of a signed char data type in C?

↳ 1 byte = 8 bits

Options:

- a) 0 to 255
- b) -128 to 127
- c) -32768 to 32767
- d) 0 to 65535

$$\begin{aligned}\text{Range} &= -2^{n-1} \text{ to } 2^{n-1} - 1 \\ &= -2^7 \text{ to } 2^7 - 1 \\ &= -128 \text{ to } 127\end{aligned}$$

# Question

Which of the following statements is correct about the float data type in C?

Options:

- a) It can store integers only.
- ~~b)~~ It can store fractional numbers up to 6 decimal places.
- c) It is used to store large integers.
- d) It occupies 8 bytes of memory.

3.140000  
↓

# Question

*s<sup>igned</sup>*

What is the difference between int and unsigned int data types in C?

Options:

- a) int cannot be negative, but unsigned int can.
- ~~b) unsigned int cannot be negative, but int can.~~
- c) Both are the same.
- d) int occupies more memory than unsigned int.

# Question

Which data type should be used to store a very large integer value in C?

Options:

- a) int
- b) char
- c) long long int
- d) float

↖ (Type Specifiers / type quantifier)

# Question

What is the size of the long double data type in C on most 64-bit systems?

Options:

- a) 4 bytes
- b) 8 bytes
- c) 10 bytes
- ~~d) 16 bytes~~

double = 8 bytes

long double = 16 bytes

# Question

What is the output of the following code snippet?

```
int a = 10;  
printf('%u', sizeof(a));
```

*10*

Options:      *unsigned int*

- a) 2
- b) 4
- c) 8
- d) 10

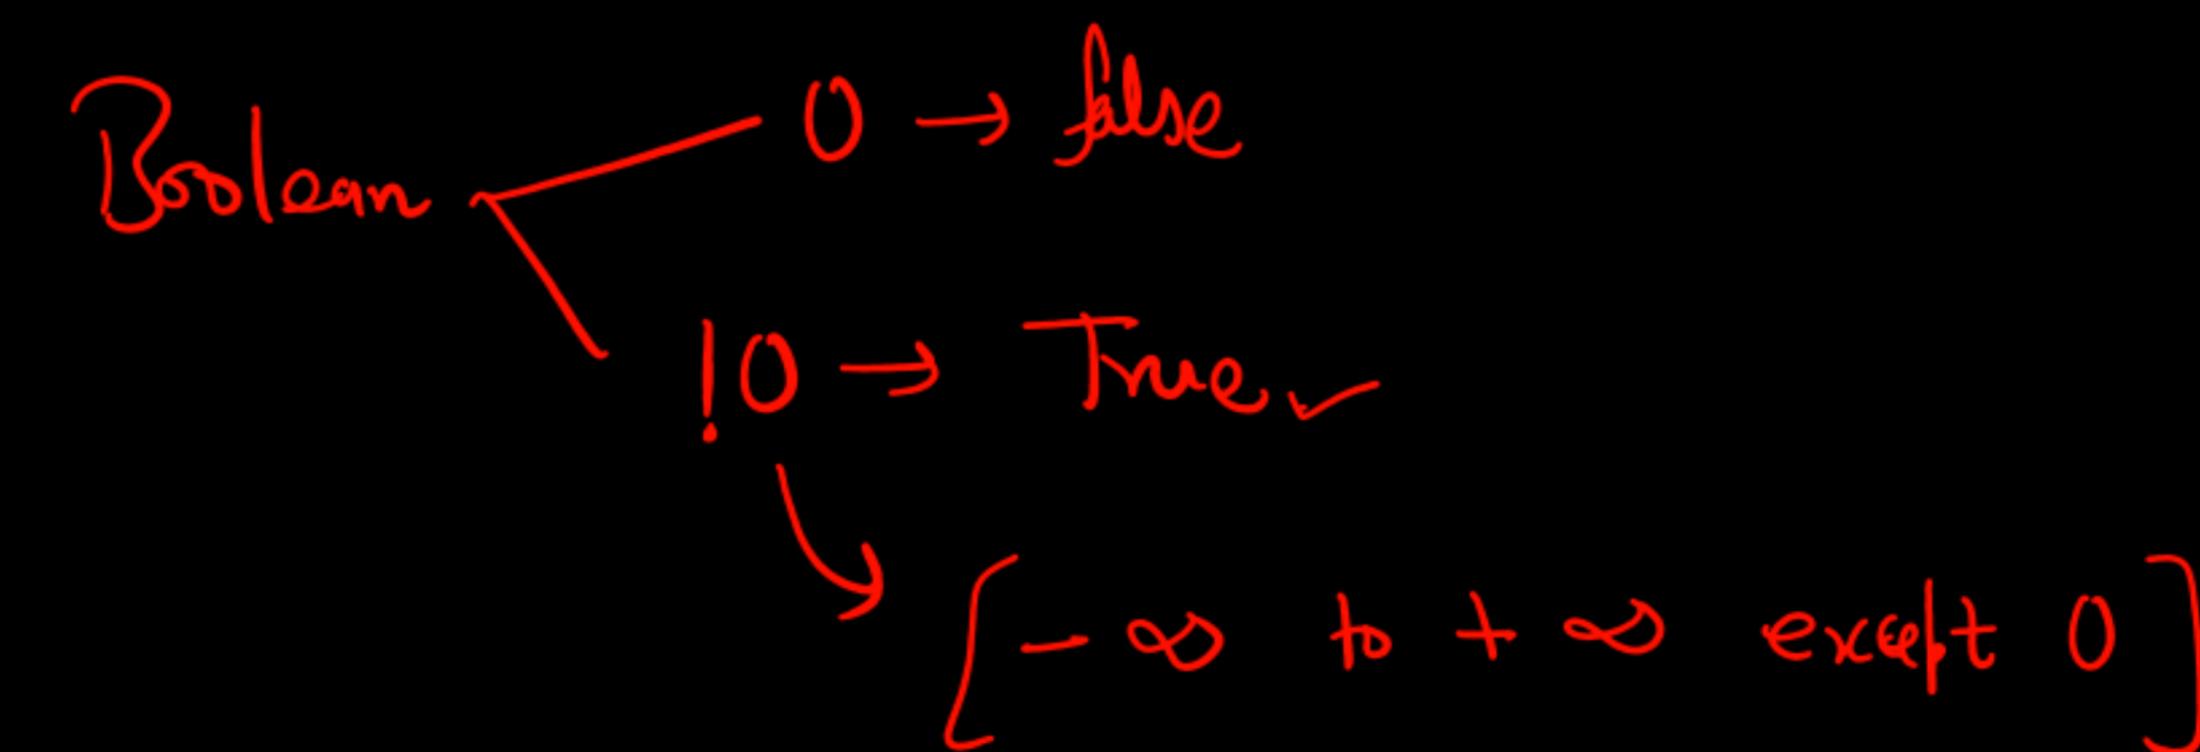

# Question

Which of the following data types can be used to store a boolean value in C?

0, 1

Options:

- a) int
- b) bool
- c) \_Bool
- d) double

# Question

Which format specifier is used to print a short int in C?

[ 2bytes ]

Options:

- a) %d
- ~~b) %hd~~
- c) %ld
- d) %f

# Question

Max = 32767

Min = -32768

What will be the output of the following code snippet?

```
int a = 32768; → a = 32768;  
short b = a; b = 32768  
printf('%d', b);
```

Start = 2 bytes  
16 bits

Range =  $-2^{16-1}$  to  $2^{16-1} - 1$   
 $= \{-2^{15} \text{ to } 2^{15} - 1\}$

32768 to 32767  
[-32768 to 32767]

Options:

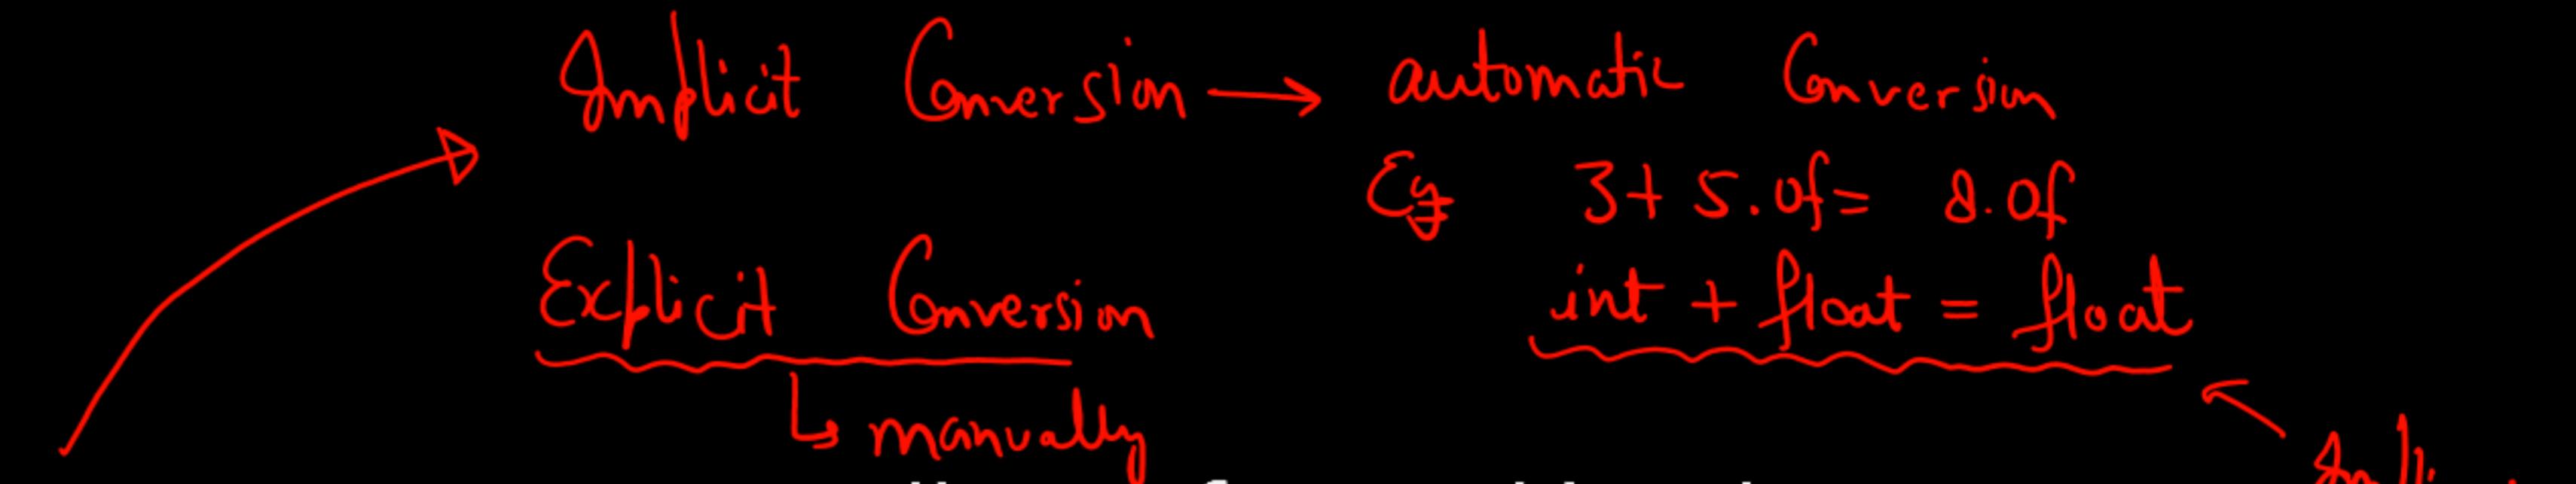

- a) 32768
- ~~b) -32768~~
- c) 0
- d) 65536

# Question

Which type conversion is automatically performed by the C compiler?

Options:

- a) Implicit conversion
- b) Explicit conversion
- c) User-defined conversion
- d) None of the above

$$3 + (\text{int}) \underbrace{5.0}_{\text{manual}} = 8 \leftarrow \text{int} \leftarrow \text{Explicit}$$

$$3 + 5.0f = 8.000000 f \leftarrow \text{implicit}$$

# Question

Which of the following statements is true about the `sizeof` ~~operator~~ in C?

Options:

- a) `sizeof` is a function.
- b) `sizeof` is a macro.
- ~~c) `sizeof` is an operator.~~
- d) `sizeof` is a keyword.

# Question

What is the output of the following code?

```
int x = 0;
```

```
printf('%d', sizeof(x++));
```

$x = 0$

 int

Options:

 int = 4 bytes

- a) 0
- b) 1
- ~~c) 4~~
- d) 8

# Question

Which of the following is a valid type specifier in C?

[const, long, unsigned short]  
signed

Options:

- a) unsigned float
- b) signed int
- c) unsigned double
- d) signed char

# Question

What will happen if you try to store a value greater than the maximum limit of unsigned char in C?

Options:

- a) Compilation error
- ~~b) The value wraps around to the minimum limit~~
- c) The value remains unchanged
- d) Runtime error

# Question

Which data type is typically used to represent an object that holds memory addresses?

Options:

- a) int
- b) float
- c) pointer
- d) char

# Question

What is the maximum value of unsigned int on a 32-bit system?

↓

4 bytes = 32 bits

Options:

- a) 32767
- b) 65535
- c) 2147483647
- d) ~~4294967295~~

$$\text{Range} = (0 \rightarrow 2^n - 1)$$

$$2^{32} - 1$$

# Question

What will be the output of the following code snippet?

```
float f = 3.14;  
printf('%d', (int)f);
```

float = 4 bytes

3 ← int  
→ Explicit Conversion

- Options:
- a) 3
  - b) 3.14
  - c) 314
  - d) Compilation error
